Developer Portfolio Website

This project is a personal portfolio website built with HTML, CSS, and Bootstrap, showcasing my front-end development skills. It serves as an online resume and project showcase, intended for potential employers and collaborators. The site is structured with clear navigation (Home, About, Services, Projects, Articles, Contact) and features a hero section, personal profile, project galleries, and interactive elements (animations, video playback). All pages were developed with user experience (UX) principles and tested for responsiveness and accessibility.

Features include:

- Professional hero and about section

- Project cards with project details and links

- Articles section linking to external informative resources

- Responsive design (desktop, tablet, mobile)

- Contact form (non-functional as placeholder)

- Custom animations and engaging interactive elements

- Manual validation (W3C HTML, W3C CSS validators)

The project follows the Five Planes of UX:

- Strategy: Defined user goals (employer and personal)

- Scope: Pages and features aligned to user stories

- Structure: Logical navigation and content grouping

- Skeleton: Wireframe-like clean layout and consistent UI

- Surface: Visually pleasing modern design using Bootstrap and custom CSS

Deployment:

- Live website hosted on GitHub Pages

- Repository: https://github.com/anaylsethis2020/html-css-resume-project

- Deployed Site: https://anaylsethis2020.github.io/html-css-resume-project/
